

Lab 10

PH142 Summer 2026

Announcements

- 8/10: Quiz24, Lab10
- 8/11: Quiz 25, Lab11
- 8/12: Quiz 26
- **8/13: Midterm 3** [no late submissions or extensions]
- **8/14: Data Project Part 3*** [no late submissions or extensions]

*Your group must meet with your assigned GSI before the due date

Lab10 Lecture Review

Inference for Regression

Assumptions:

1. **Linearity:** The relationship between x and y is linear in the population
2. **Normality of Residuals:** Variable y varies Normally around the line of best fit
3. **Independence:** Observations are independent
4. **Constant Variance:** The standard deviation of the responses is the same for all values of x

Lab10 Lecture Review

Evaluating Assumptions

We can use different diagnostic plots to test our assumptions:

	What to Look For
Scatter plot of data w/ regression line	No trend, residuals are sometimes positive and sometimes negative
Q-Q plot of residuals	Residuals closely follow the line
Scatter plot of fitted vs. residuals	No trend, random scatter
Box plot of y vs. residuals	IQR of residuals box smaller than y box

Lab10 Lecture Review

Good Example
(Assumptions met)

(a) Scatter plot

(b) Q-Q plot

(c) Fitted vs. residuals

(d) Amount explained

Lab10 Lecture Review

Bad Example

(Assumptions not met)

LAB 10 Walkthrough

Lab Submission

- Follow the directions on the LAB10 file
- Submit using the **Terminal Tab** (next to the console in the bottom left pane)
 - Copy and paste the given line into the terminal
 - Follow prompts (NOTE: the terminal will **not** show your password being typed out!)
- **CHECK IN GRADESCOPE THAT ALL YOUR TESTS PASSED**
